Summer 2027 Internships | Computer Engineering, Software & Embedded Systems

Education

Georgia Institute of Technology Jun. 2026 – Expected May 2028

Bachelor of Science in Computer Engineering; GPA: 4.0/4.0 *Atlanta, GA*

- Threads: Distributed System & Software Design and System Architecture
- In progress: Circuit Analysis, Intro to Database Systems, Data Structures & Algorithms

University of Georgia Aug. 2025 – May 2026

Bachelor of Science in Computer Systems Engineering (transfer) *Athens, GA*

- Morehead Honors College; Activities: Robotics, UGA UNICEF

Experience

Co-Founder & Software Developer Jan. 2026 – Present

Classify, AI Classroom Startup *Atlanta, GA*

- Co-developed a classroom platform integrating Azure AI Document Intelligence handwriting recognition, Gemini reasoning, and Supabase to support feedback on students' written work.
- Designed a Supabase relational database supporting courses, enrollments, assignments, submissions, and student profiles; developed image preprocessing to reduce noise in handwriting images.
- Co-founded a six-person team awarded a $7,500 grant through Franklin CREATE! at UGA.

Machine Learning Researcher Oct. 2025 – May 2026

University of Georgia College of Engineering *Athens, GA*

- Developed and evaluated XGBoost models in a study comparing 10-K sentiment, financial metrics, and technical price features using 2015–2024 S&P 500 data across four post-filing windows.
- Coauthored a research poster reporting that higher raw performance did not establish statistically significant improvement over the technical-only baseline; conducted four ML and quantitative finance literature reviews.

Electrical Engineering Intern Aug. 2024 – Apr. 2025

Vital Systems *Buford, GA*

- Loaded existing firmware onto FPGA-based CNC control boards and performed functional testing for production readiness, completing assigned procedures independently after initial training.
- Assembled PCBs by soldering components; traced a malfunctioning control board to a faulty component and removed it during rework.

Projects

CHIP-8 Interpreter | *C, SDL2, GNU make* Dec. 2025

- Built a C interpreter modeling 4 KB of memory, 16 registers, and a subroutine stack; decoded binary instructions with bitwise masking and shifts to implement arithmetic and control flow.
- Implemented ROM loading and SDL2 graphics, input, and audio, including a 64x32 display with XOR sprite collision detection; tested and debugged with CHIP-8 test ROMs.

Skills

Languages: C, C++, Python, Java, SQL, TypeScript, JavaScript
Tools: Git, GitHub, Unix/Linux, GNU make, SDL2, Supabase, MATLAB, Raspberry Pi, Arduino
Hardware: Soldering, PCB assembly, functional testing, oscilloscope, multimeter
Soft Skills: Collaboration, problem-solving, initiative, independent work
